Take Home 611 Unit 5 TEST

Please complete the following problems independently. They will count for 20 points towards your Unit 5 test. Don't forget your structure!

1. What is the MOST descriptive name for the quadrilateral ABCD with vertices A (-3, -7), B (-9, 1), C (3, 9) and D (9, 1)?

Note: not only must you provide clear evidence that the figure is what you claim, but you must provide enough evidence to show that the figure IS NOT a more specific figure. (For example, you might prove that the figure is a rectangle, but you must also show that it is NOT a square.)
